

8184

LOW-DROPOUT, 3 V REGULATOR — HIGH EFFICIENCY

Dwg. PS-022

ABSOLUTE MAXIMUM RATINGS

| | |
|---------------------------------------------|-----------------|
| Input Voltage, V_I | 10 V |
| Output Current, I_O | 150 mA* |
| Operating Temperature Range, T_A | -20°C to +85°C |
| Junction Temperature, T_J ... | +150°C† |
| Storage Temperature Range, T_S | -40°C to +150°C |

* Output current rating is limited by input voltage, duty cycle, and ambient temperature. Under any set of conditions, do not exceed a junction temperature of +150°C. See next page.

† Fault conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.

Designed specifically to meet the requirement for extended operation of battery-powered equipment such as cordless and cellular telephones, the A8184SLT voltage regulator offers the reduced dropout voltage and quiescent current essential for maximum battery life. Applicable also to palmtop computers and personal data assistants, the device delivers a regulated, continuous 3 V output at up to 75 mA under normal operating conditions, or to 150 mA (transient) under worst-case conditions.

A PMOS pass element provides a typical dropout voltage of only 90 mV at 60 mA of load current. The low dropout voltage permits deeper battery discharge before output regulation is lost. Furthermore, quiescent current does not increase as the dropout voltage is approached, an ideal feature in standby/resume power systems where data integrity is crucial. Regulator accuracy and excellent temperature characteristics are provided by a bandgap reference.

This device is supplied in a small-outline plastic transistor package (SOT-89/TO-243AA) for surface-mount applications. The A8184SLT is rated for operation over a temperature range of -20°C to +85°C. A similar device with an ENABLE input for control over sequential power up, standby, or power down is the A8183SLU.

FEATURES AND BENEFITS

- High Efficiency Provides Extended Battery Life
- 90 mV Typical Dropout Voltage at $I_O = 60$ mA
- 45 μ A Typical Quiescent Current at $V_I = 6$ V
- Up to 150 mA Output Current
- Internal Thermal Protection
- Surface-Mount Package

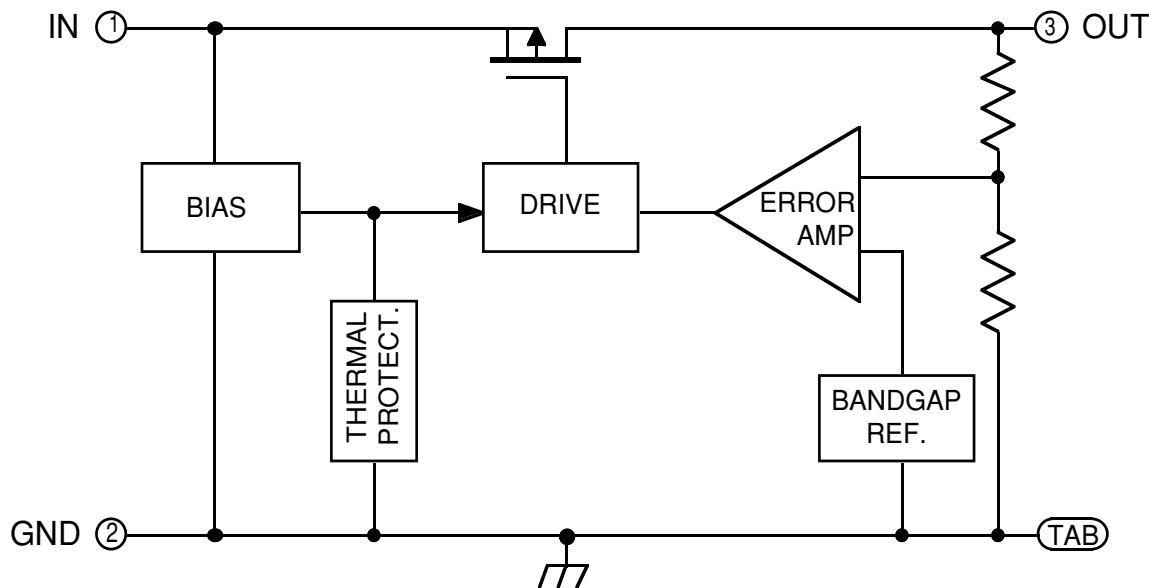

APPLICATIONS

- Cordless and Cellular Telephones
- Personal Data Assistants
- Personal Communicators
- Palmtop Computers

Always order by complete part number: **A8184SLT** .

FUNCTIONAL BLOCK DIAGRAM

Dwg. FS-012-4

MAXIMUM ALLOWABLE OUTPUT CURRENT with device mounted on 2.24" x 2.24" (56.9 mm x 56.9 mm) solder-coated copper-clad board in still air.

| T _A | Maximum Allowable Output Current in Milliamperes with V _I = 8 V, T _J = 150°C, Period ≤ 10 s* | | | | | | | | |
|----------------|--------------------------------------------------------------------------------------------------------------------|-----|-----|-----|-----|-----|-----|-----|-----|
| | dc (Duty Cycle) | | | | | | | | |
| | 100% | 90% | 80% | 70% | 60% | 50% | 40% | 30% | 20% |
| 25°C | 95 | 105 | 120 | 135 | 150 | 150 | 150 | 150 | 150 |
| 50°C | 75 | 85 | 95 | 110 | 125 | 150 | 150 | 150 | 150 |
| 70°C | 60 | 65 | 75 | 85 | 100 | 120 | 150 | 150 | 150 |
| 85°C | 50 | 55 | 60 | 70 | 80 | 100 | 125 | 150 | 150 |

$$* I_O = (T_J - T_A) / ([V_I - V_O] R_{\theta JA} \cdot dc) = (150 - T_A) / (5 \cdot 258 \cdot dc)$$

Output current rating can be increased (to 150 mA maximum) by heat sinking or reducing the input voltage. Conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.
