VHF power MOS transistor

BLF147

FEATURES

- High power gain
- Low intermodulation distortion
- Easy power control
- Good thermal stability
- Withstands full load mismatch.

PIN CONFIGURATION

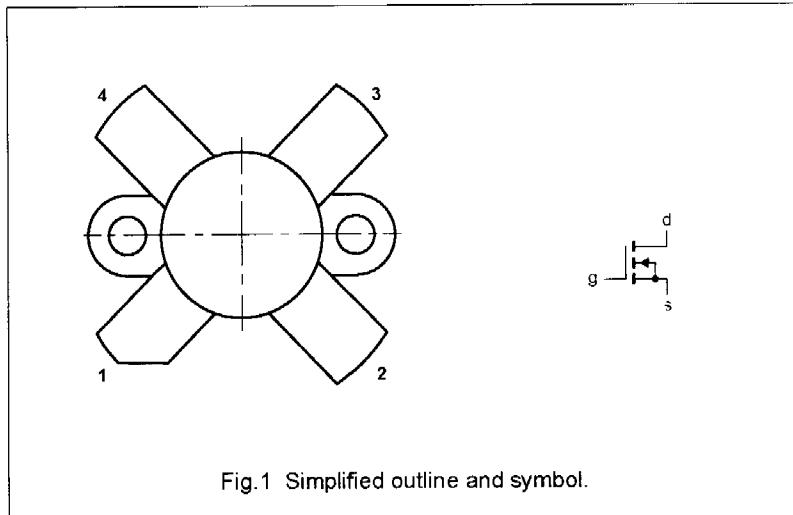

Fig.1 Simplified outline and symbol.

DESCRIPTION

Silicon N-channel enhancement mode vertical D-MOS transistor designed for industrial and military applications in the HF/VHF frequency range.

The transistor is encapsulated in a 4-lead, SOT121 flange envelope, with a ceramic cap. All leads are isolated from the flange.

A marking code, showing gate-source voltage (V_{GS}) information is provided for matched pair applications. Refer to 'General' section for further information.

CAUTION

The device is supplied in an antistatic package. The gate-source input must be protected against static charge during transport and handling.
